

## 120mm Profile

An old idea re-mastered.

Take an old style slimline lightbox profile and rework it to accept modern printable fabrics, what could be simpler to achieve? Using either dimmable LED's or, cost saving, dimmable electronic ballasts. This slim backlit profile will enhance any shop floor experience.

The product also benefits from an acrylic or voile diffuser, (depending on lighting option) which also acts as a barrier between the electrics and the person changing the graphic image.

Remember, LED lighting might be a dearer option, but is cheaper to run and in some cases the cost of the LED's can be offset against Corporation Tax. Ask our sales team for details on the ECA scheme.

LED lighting gives off minimal heat. This might not be a significant point, but imagine the heat given off by several boxes, and the cost savings of not having to run the shops air conditioning system at full power. Then the issue makes more sense and LED's become a cost effective option.
