

24mm Frame

A small, non-illuminated profile for big ideas.

This profile can simply be used as a standard, non-lit graphic display system. But why not use it to hide unsightly brickwork or save the cost of plaster-boarding and making good uneven walls prior to re-decorating? This allows your client more cost-effective options when it comes to a make-over in the future.

We say non-illuminated, but why not try it with the new LED light sheets!
