

Texsign 42

You Asked, We Manufactured.

The TexSign 42mm was developed directly from trade feedback. When you told us your clients were asking for a slimmer alternative to the standard 60mm frame, we engineered the solution.

This profile delivers the sleek, low-profile finish the market wants, without sacrificing the rigidity needed for large-format graphics. It provides the same straightforward assembly you expect, making it a safe pair of hands for your production schedule.

Whether you are handling volume roll-outs or one-off builds, the 42mm system helps you turn jobs around faster and deliver a premium finish every time.
